

Washer-Wall Cabinet Sizing Sheet

Map your layout and clearances before ordering materials.

Retire those flimsy wire shelves and plan a perfectly sized built-in workspace over your side-by-side machines. Use this sheet to measure accurately and order the exact stock cabinets you need.

● Key Dimensions

15 or 18 in

Over-fridge uppers for headroom

18 or 24 in

Pull-out twin hamper base width

1x2 or 2x2

Wood wall cleats for counter

3 in

Scribed filler strips on ends

4 to 6 in

Clearance behind machines for venting

1 in

Mandatory gap between vibrating machines

Lift-off counter top

Never screw the counter into the cleats or base cabinet. Let it rest securely on top so you can easily lift it off for appliance maintenance.

● Site Measurements & Checks

- Measure total room width side-to-side along the baseboard.
- Record vertical distance from finished floor to machine top.
- Note total depth from back drywall to front appliance doors.
- Locate water valves, 240-volt outlet, and rigid exhaust vent.
- Check if recessed electrical boxes can buy an extra inch.
- Verify rigid metal dryer vent routes without sharp bends.

● Countertop Material Weights

Find your row: **Your lifting capacity**

Your lifting capacity	Your pick	Why
Solid hardwood butcher block	5 to 7 lbs/sq ft	Two-person lift required for safety
Edge-glued solid pine panel	3 to 4 lbs/sq ft	Manageable single-person lift
Plywood with laminate veneer	2 to 3 lbs/sq ft	Easy single-person lift

● Project Notes & Dimensions

Enjoy your beautiful, highly functional new laundry workspace!
