

Mature-Width Spacing Chart

Plan a self-sustaining, low-maintenance front yard

Design your front bed perfectly for its mature size to eliminate overcrowding and weekend yard work. Use these exact spacing distances for a curb-ready yard on autopilot.

● Autopilot Yard Setup

4 in deep

Mow strip, flush steel edge

Year 5

Spaced for mature width

1/2 in

Drip line under mulch

12 in apart

Groundcover as living mulch plugs

Clusters of 3

Self-cleaning blooming shrubs

2 in

Organic bark mulch layer

45 mins

Smart hose timer duration

Prevent Root Rot

Never create mulch volcanoes. Pull organic material away from stems and avoid spreading it too thickly to prevent bark rot and suffocating shallow perennial roots.

● Featured Plants Spacing

Find your row: **Yard Condition**

Yard Condition	Your pick	Why
Under deep roof eaves	Dwarf Spruce (30 in)	Survives dry shadow zones
Gets direct afternoon light	Shrub Roses (48 in)	Requires 6 hrs to bloom
Borders the lawn edge	Creeping Thyme (18 in)	Blocks weeds at the front
Under front house windows	Dwarf Boxwood (36 in)	Stays low, won't block view
Large open corner space	Spreading Juniper (60 in)	1 plant fills the gap

● Site Conditions to Check

- Measure exact mower wheel tread width on a paved driveway.
- Test soil drainage; choose moisture-loving varieties if water pools.
- Call local utility marker service to map buried gas pipes.
- Monitor front bed to verify direct sunlight exposure.

● Installation Sequence

- 1 Trench the Border** Dig a flat perimeter trench matching your mower wheel width.
- 2 Set Steel Flush** Install edging entirely flush with soil grade to prevent strikes.
- 3 Run Drip Lines** Weave tubing with built-in emitters over root zones before mulching.
- 4 Plant Groundcover** Space plugs properly so they form a weed-blocking living mat.
