Walk-In Shower Tile Layout Sheet

Plan a flawless, curbless oasis before a single tile is cut.

Map out your exact sizes, calculate the perfect floor slope, and align your wall niche. Confirm these details early to keep your sleek design grounded in everyday safety.

Key Specifications

0.42 or higher
DCOF rating on manufacturer's spec sheet

¼ inch
drop per foot to the drain

Single-plane
slope required for a linear drain

Large-format
continuous floor tile size per zone

Waterproof epoxy
matching grout choice for shower floor

Prevent Awkward Sliver Cuts

Plan your wall layout from the bottom up to establish a predictable horizontal grout line rhythm for the rest of the room's built-in features.

Niche-To-Grout-Line Sizing

Find your row: **Your wall tile height**

Your wall tile height	Your pick	Why
3 inches	12-inch niche	spans exactly 4 tiles
4 inches	12-inch niche	spans exactly 3 tiles
6 inches	12 or 18-inch niche	spans 2 or 3 tiles
12 inches	12 or 24-inch niche	spans 1 or 2 tiles

Before You Cut Or Order

- ○ Verify the DCOF rating on your chosen floor tile spec sheet.
- ○ Check that framing drops the subfloor enough for the required slope.
- ○ Align your planned niche dimensions with your wall tile height.
- ○ Ensure your linear drain strip runs along the back wall.

Project Notes

Enjoy your beautiful, barrier-free retreat knowing every detail was planned to perfection.
